**Re: (GPR) Ground Penetrating Radar**

**Our client needed to add floor drains for new handicap restrooms in existing buildings. Diamond Drilling came out with the GPR equipment and located the embedded post tension cables, marking them clearly on the floor and on paper for us. The alternative to using GPR is exploratory chipping, which is very dangerous around stressed post tension cables. Safety was our main concern and using GPR proved to be a huge benefit to us. Diamond Drilling, with the GPR unit, was able to locate the cables in minutes saving the owner thousands of dollars in labor and the possibility of structural failure. I would not hesitate to call Nick Schwartz again to use this service. Nick was knowledgeable and experienced and his response time was immediate. I would highly recommend Diamond Drilling with the GPR unit to anyone who needs to see into concrete before demo.**

Sincerely,

**William A Goosen
